

Cross Reference

MCT to 9000 Series

The following chart is provided as a tool to assist you in cross referencing the old MCT model numbers with the new PULSAtrol Series 9000. This is intended as a guideline to help you quickly find an equivalent model. It is recommended that you compare the features of the referenced model for the Series 9000 to make sure that it fits with your specific application. Many features that were optional in the MCT product line are now included in the standard base product.

If there is a '?' in the new model number it refers to a feature not offered in the MCT Series. Please check the price book to verify the actual selection for this position in the model.

Where the '-NOTE' appears in the new model number, it typically references a private label or special suffix code from the MCT product line that is not reflected in the Series 9000 model. Private label and customized configurations will be handled through a customer specific suffix code. Contact your Pulsafeeder representative for details on the private label program or to customize one of these controllers for a unique application.
