Chase Field Drink Rails and Table Tops Made with King StarBoard®

Chase Field, formerly Bank One Ballpark, is a state-of-the-art retractable roof ballpark with a synthetic grass turf field. The 48,633-seat stadium is home to the Arizona Diamondbacks.

The Drink Rails were designed with the Coors Light® branding

graphics on vinyl. The drink rails are available in various lengths with 1, 2, or 3-cup holders. The Cup Holders keep the beer colder, so the last sip is colder and more refreshing than the first. The drink rails are adjustable to bar height for bar stools and standing-only, or ADA height for lower seating and wheelchairs.

Features include inductive phone chargers, purse hooks, foot rails, and power that can be controlled at the drink rail or hard-wired into the venue's electricity.

The Table Tops were designed with Coors Light® branding colors for the Coors Light® Strike Zone seating areas. The seating area includes cabanas, flat-screen TVs, a pool table, food and bar service. Guests can eat, socialize, and watch the game with a spectacular view of the field. Designed exclusively for Molson Coors, the Drink Rails and Table Tops are made with Dolphin Gray, 3/4" gauge of King StarBoard.

Caseway—SC-125 Acrylic Solvent Cement

SC-125 Acrylic Solvent Cement from Caseway Industrial Products is the fastest and strongest adhesive available on the market for acrylic substrates. SC-125 is formulated for cementing acrylic to itself and other plastics such as polycarbonate, styrene, and butyrate (CAB). Strong joints are made by using the "soak method" or the "capillary method" that introduces the cement to the joint by means of an eye dropper or syringe.

Solvent cementing depends on the softening and intermingling of the two surfaces to be joined so that there is actual cohesion between the materials themselves. After assembly, the solvent evaporates or dissipates through the material and a hard, clear joint is obtained. The choice of cementing technique will depend on the type of joint to be cemented. Please note that when cementing acrylic in high humidity, SC-125 may leave white marks on the acrylic referred to as "blushing." Under these conditions, or when bonding extruded acrylic, SC-94 is recommended. For more details, download the [SC-125 Acrylic Solvent Cement](#) brochure.

Robert Ackerly is Aggie Bound!

We would like to congratulate Kathleen Ackerly with Foust Marketing and her son Robert Ackerly on his recent graduation from Montgomery High School on May 25, 2021. He enjoyed his time in high school and was presented the Mr. Leadership award of the MHS Class of 2021 as well as being a member of the National Honor Society, Mu Alpha Theta, Student Council and was the Team Captain and driver of the MHS robotics team. His team's skills score ranked #177 out of 2600 teams worldwide earning them a spot to compete in the 2021 Vex Robotics World Championship. Robert is pursuing a degree in Aerospace Engineering at Texas A&M University. He intends to join the TAMU Vex Robotics Collegiate team and continue his interest in building, programing and driving bots. We are especially proud of Robert and wish him the best of success moving forward. "Gig 'Em Aggies!"

Harrison—Custom Fabricated Manifolds

Harrison Machine & Plastic can fabricate nearly any size or shape fitting that can physically be manufactured. They can fabricate any degree fitting required to complete that challenging installation project. For example, the custom fabricated Kynar® PVDF pipe and fitting above would have required the contract to purchase or rent a socket fusion tool to complete the project.

Send Harrison your prints or a sketch and their experienced

team can custom fabricate the fittings to your specifications.

Custom fabricated items can be made from plastic materials including PVC, CPVC, HDPE, PP, and PVDF. Cut your installation costs by buying pre-fabricated header-manifold systems fabricated your prints.

Custom Fabricated Items:

- Drip pans
- Header systems
- Tank covers
- Perforated pipe and sheet
- Fume scrubbers and Hoods
- Double containment systems
- Machined fittings
- Plenums

The Blue Line—Win NCAA T-Shirt!

Foust Marketing is offering the opportunity to win a prize in this issue of [The Blue Line](#).

We are offering a NCAA T-Shirt of your favorite team courtesy of Foust Marketing.

Enter by visiting below link with the answers to the questions.

1. What King Plastic material was the Drink Rails and Table Tops made with?
2. In addition to acrylic, what other plastic materials is the Caseway SC-125 adhesive formulated for bonding?
3. What degree is Robert Ackerly pursuing at Texas A&M?
4. How can you cut your installation costs by using Harrison Machine & Plastic?

Complete the entry form at www.foustmarketing.com/entry-form.

5. What did Morgan Freeman say about the truth?

Winner of the **Anker Wireless Charging Stand** from the last issue courtesy of Meunier Technologies and Foust Marketing.
